

## ***MISCELLANEOUS ITEMS GENERAL SECTION 9***

**9.1 Miscellaneous Items.** In addition to the major highway construction materials, a variety of other products are purchased and used in the construction and maintenance of highways and related facilities. These products cannot be categorized under any general type and are not found in the Standard Specifications. They are covered in the Laboratory and [Field Sec Series 2000](#) of this Manual. The materials included in the Field and [Laboratory Series 2000](#) of this Manual are those items used with regularity. Materials which would normally be identified in this category but are seldom used may not be included. The inspector should contact the District Materials Engineer should questions arise concerning any material that has not been incorporated into this Manual.

All items of the Laboratory and Field Sec 2001 through 2036 of this Manual must comply with the specification requirements as set forth in a bid request issued by the General Services Division or a job special provision.

After bid requests have been issued and price quotations and other considerations have been reviewed, the Commission may make the award. If awarded, purchase orders to the designated supplier will be issued by the General Services Division on all items purchased by bid requests except sodium chloride, calcium chloride, aggregate, and bituminous materials. Purchase orders for these materials are issued by the District.

To check the conformance of these materials, they must be properly sampled and tested in accordance with standard procedures unless otherwise specified in the bid request or specifications. Reference should be made to the appropriate Laboratory or Field Section of this Manual for guidance on these procedures.
